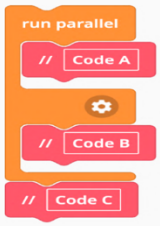
Code Blocks (Multiple Actions & Iteration) with example:

Perform multiple actions together at the same time

Example: Code A and B will start at the same time. When they both finish, code C will start.

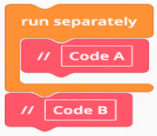


Start several action sequences separately and at the same time

Example: Code A and B will start at the same time separately from each other.

This CoBlock structure makes sense when code B consists of several CoBlocks.

This is similar to the "run parallel" example above if code C was empty.

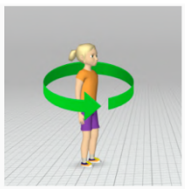


Follow the instructions:

1. Get your story ready
2. Click the link to https://www.cospaces.io/ or enter link in the Google Chrome Browser
3. After entering *Username* and *Password*
4. Click "Log in"
5. Open a new Scene
6. Use any 5 (minimum) of the following features of the CoSpaces to complete the project

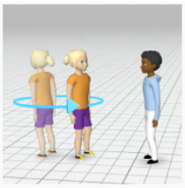
Code Block Features:

Make my program **wait** for some time

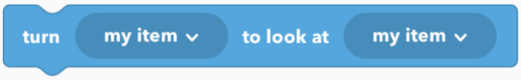


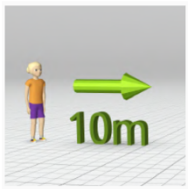
Make an object or a character **turn** over time

Stop an object or a character

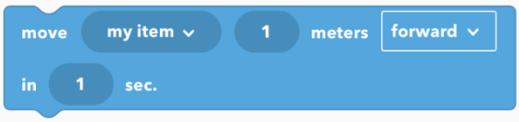


Make an object **turn towards another object**

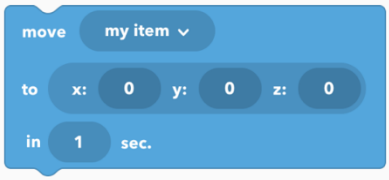




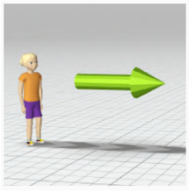
Make an object **move a certain distance** in a certain direction over time



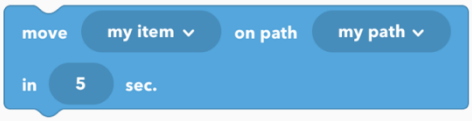
Make an object **move to a certain point** over time



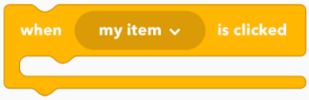
Stop an object or a character

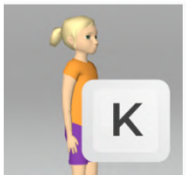


Make an object **move on a path** over time

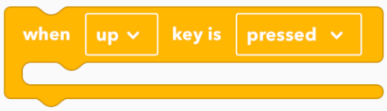


Make something happen **when** an item is **clicked**

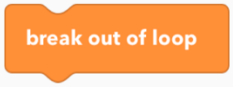




Define what happens when a certain **key** is **pressed**



Make one or more actions **repeat** a certain amount of times

Make an action happen **forever** as a **loop**


Stop a loop from **repeating**
